Order By

Union Operator

TOP

Union All Operator

Group By

Except Operator

Having Clause

Intersect Operator

e_id	e_name	e_salary	e_age	e_gender	e_dept
1	Sam	95000	45	Male	Operations
2	Bob	80000	21	Male	Support
3	Anne	125000	25	Female	Analytics
4	Julia	73000	30	Female	Analytics
5	Matt	159000	33	Male	Sales
6	Jeff	112000	27	Male	Operations

Order By

ORDER BY is used to sort the data in ascending or descending order.

Ascending

Descending

Order By: Syntax

Let's sort the
records using
the **Order By**
clause

```
SELECT column_list FROM table_name  
ORDER BY col1, col2, ..... ASC |  
DSC
```

TOP Clause

TOP clause is used to fetch the **top N** records.

e_id	e_name	e_salary	e_age	e_gender	e_dept
1	Sam	95000	45	Male	Operations
2	Bob	80000	21	Male	Support
3	Anne	125000	25	Female	Analytics
4	Julia	73000	30	Female	Analytics
5	Matt	159000	33	Male	Sales
6	Jeff	112000	27	Male	Operations

TOP Clause: Syntax

Let's get the
top N records

```
SELECT TOP x column_list FROM  
table_name;
```

Group By

Group By is used to get an aggregate result with respect to a group.

	 Male	 Female
 Salary	\$83,000	\$90,000

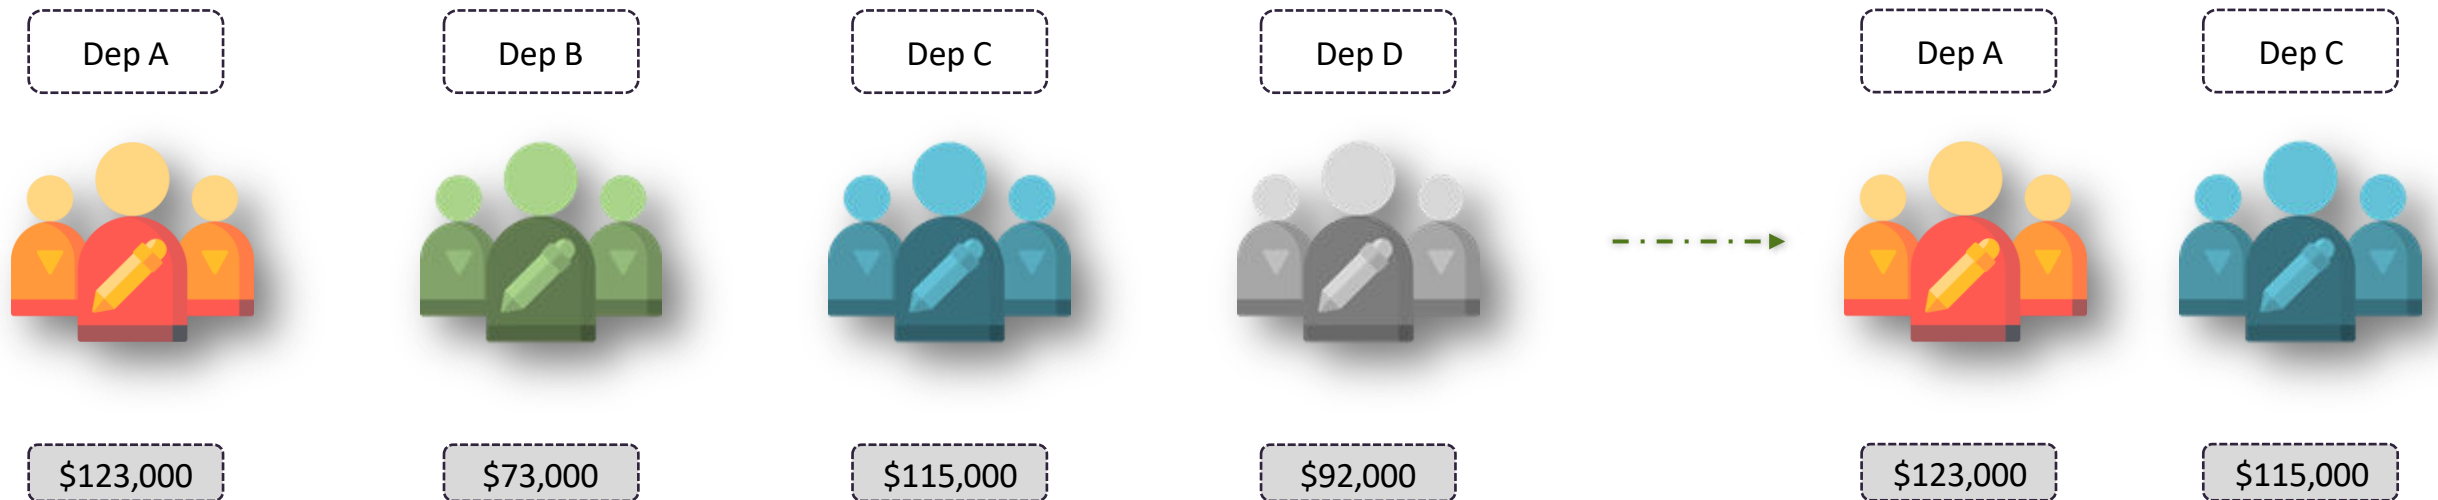

Group By: Syntax

```
SELECT column_list  
FROM table_name  
WHERE condition  
GROUP BY colname(s)  
ORDER BY colname(s)
```

Having Clause

Having clause is used in combination with Group By to impose conditions on groups.

Having Clause: Syntax

```
SELECT column_name(s)
FROM table_name
WHERE condition
GROUP BY column_name(s)
HAVING condition
ORDER BY column_name(s);
```

Union Operator

Union operator is used to combine the result set of two or more SELECT statements.

A

B

A ∪ B

Union Operator: Syntax

Using the
Union
Operator

```
SELECT column_list FROM table1  
Union  
SELECT column_list FROM table2
```

Union Operator

s_id	s_name	s_marks
1	Sam	45
2	Bob	87
3	Anne	73
4	Julia	92

Student_Details1

s_id	s_name	s_marks
3	Anne	73
4	Julia	92
5	Matt	65

Student_Details2

Union All Operator

Union All operator gives all rows from both tables including the duplicates.

A

B

A union all B

Except Operator

Except Operator combines two select statements and returns unique records from the left query which are not part of the right query.

A

B

A - B

Except Operator: Syntax

```
SELECT column_list FROM table1  
EXCEPT  
SELECT column_list FROM table2
```

Except Operator

s_id	s_name	s_marks
1	Sam	45
2	Bob	87
3	Anne	73
4	Julia	92

Student_Details1

s_id	s_name	s_marks
3	Anne	73
4	Julia	92
5	Matt	65

Student_Details2

Intersect Operator

Intersect Operator helps to combine two select statements and returns the records which are common to both the select statements.

$A \cap B$

Intersect Operator: Syntax

Using the
Intersect
Operator

```
SELECT column_list FROM table1  
INTERSECT  
SELECT column_list FROM table2
```

Intersect Operator

s_id	s_name	s_marks
1	Sam	45
2	Bob	87
3	Anne	73
4	Julia	92

Student_Details1

s_id	s_name	s_marks
3	Anne	73
4	Julia	92
5	Matt	65

Student_Details2

Quiz

What is the purpose of 'Order By' clause?

A

Sorting your result set using column data

B

Aggregation of fields

C

Sorting your result set using row data

D

None of these

What is the purpose of 'Order By' clause?

A

Sorting your result set using column data

B

Aggregation of fields

C

Sorting your result set using row data

D

None of these

What is the purpose of 'Group By' clause?

A

Group data by column names

B

Group data by row values

C

Group data by column & row values

D

None of these

What is the purpose of 'Group By' clause?

A

Group data by column names

B

Group data by row values

C

Group data by column & row values

D

None of these

Which of these is used with aggregate functions?

A

Select

B

Where

C

Group By

D

None of these

Which of these is used with aggregate functions?

A

Select

B

Where

C

Group By

D

None of these

Which of these is the correct syntax for union operator?

A

SELECT column_name(s) FROM table_name1 UNION table_name2

B

SELECT column_name(s) FROM table_name1
UNION
SELECT column_name(s) FROM table_name2

C

UNION SELECT column_name(s) FROM table_name1
SELECT column_name(s) FROM table_name2

D

SELECT FROM table_name1 AND table_name2

Which of these is the correct syntax for union operator?

A

SELECT column_name(s) FROM table_name1 UNION table_name2

B

SELECT column_name(s) FROM table_name1
UNION
SELECT column_name(s) FROM table_name2

C

UNION SELECT column_name(s) FROM table_name1
SELECT column_name(s) FROM table_name2

D

SELECT FROM table_name1 AND table_name2

Thank You
